Clear Google Chrome Browser Cache on Android devices

1. Open the Google Chrome app, the icon should look similar to this.

2. Tap the 3 dots circled in the image below to bring up a drop down menu. There may be an arrow instead of the 3 dots here – if there is, you may need to update your version of Google Chrome, which will also be an option in the menu that opens. We recommend always updating to the latest version.

3. Tap History in the resulting menu that opens (see image below)

4. Tap "Clear Browsing Data" at the top of the History menu

5. Another menu will open with a few boxes for you to check – Make sure you check all three boxes and then press Clear Data at the bottom of the screen.
